

Touchless Security Screening

Evolv Express[®]

The days of invasive weapons screening in our schools can be over.

Screening procedures that rely on metal detectors, hand wands, and invasive bag checks are slow and manual, resulting in uncomfortable, and unsafe, crowding as students begin their school day.

Introducing the Evolv Express

Artificial Intelligence (AI) differentiates personal items from threats.

Unlike traditional metal detectors, Evolv Express uses advanced sensor technology and AI to screen students while they walk through at a natural pace—without stopping and without handing over their belongings. Express offers an open, free-flow system proven to operate up to 10x faster than traditional metal detectors, alerting operators to the presence of weapons and threats while ignoring harmless personal items like cell phones, keys, coins, etc.

See potential threats for faster issue resolution.

When a potential threat is detected by the system, real-time image aided alarms show guards where the potential threat is located on the person or in his/her bag. This greatly reduces the amount of physical contact required and allows the guards to act quickly and efficiently.

Prioritize the guest experience

Students and others can enter your venue together without long lines and invasive checks. It's a welcoming experience that maintains dignity and accelerates entry for both students, faculty, and others entering the school or facility while keeping them safe from threats.

Only Evolv Express[®]

Fast and Efficient: Screen 3,600 people per hour, 10X faster than metal detectors

Easy to Operate: See where the threat is located, reducing search time and fatigue.

Flexible and Portable: Ideal for indoor and outdoor use, easy to set up and move

Integration: Communicate alerts to other security technologies across a venue.

Analytics: Support post-event analysis and a proactive security posture with the Web-based and Mobile-enabled app.

Advance a proactive security posture.

With Evolv Insights, the accompanying web-based and mobile-enabled analytics application, Evolv Express can account for its own performance, supporting post-event analysis and future operational planning. View student/visitor arrival curves and alarm rates by entrance, time, and date to understand where and when the biggest issues are present. Useful for both school days and special events such as sports and performances.

A needed solution for today's schools

Evolv Express is the world's first and only touchless security screening solution that meets all of the post-pandemic security screening requirements for schools. Express is proven to operate up to 10x faster than traditional metal detectors with its dual lane, free-flow entrances and fusion of new sensor technology and AI. The system is able to spot weapons and threats while ignoring harmless personal items while students and visitors simply walk through at a normal pace. Long lines, crowds, and congregating students at entranceways will be significantly reduced or even eliminated letting students get into school and venues quicker and safer than ever before.

About Evolv Technology

Founded in 2013, Evolv Technology is the leader in human security solving the security screening problems of today with the most innovative technology and thinking. Evolv makes it possible for venues of all kinds to keep visitors and employees safe from concealed weapons, pandemic health threats, and intruders. The company's Evolv Express has earned industry accolades that include the 2021 Artificial Intelligence Product Excellence Award, 2020 Edison Awards™, 2020 Campus Safety BEST Award, and two Secure Campus 2020 Awards.

“

We knew our former security screening process would provide challenges in the pandemic environment,” said John White, managing director of corporate safety and security at Hershey Entertainment and Resorts. “We'd already been evaluating how we could improve on our guest screening process and had piloted Evolv Express last fall because the system could accommodate thousands of people an hour in a frictionless, nonstop flow. As we began formulating the security screening aspect of our pandemic reopening strategy, it was clear that Evolv Express was the best solution that could meet our requirements. Our guest and our security staff have been pleasantly surprised at the speed of the touchless screening experience that largely eliminates manual bag checks. The responsive customer support and working relationship we have with the Evolv team is just as phenomenal as their product.”

Evolv Technology has screened more than 200 million people, second only to the Department of Homeland Security's Transportation Security Administration (TSA) in the United States, and its technology combines powerful, advanced sensors with proven artificial intelligence (AI), security ecosystem integrations, and comprehensive venue analytics to reliably detect threats 10x faster than traditional metal detectors.

Seeing is believing. Watch our latest videos, see the ever-growing list of organizations using our products, or join our Experience Evolv Events. Learn more at www.evolvtechnology.com
